# Example Guide

v1.2.3

November 6, 2023

# Contents

# Overview

This is an example guide to show how the documentation builder works.

## Contents

This project contains nothing as it is only server as an example for building markdown into beautiful documentation.

- Example_Guide.pdf
    - This guide is not really a guide, more of an example. Hence it being called an example!

**This is bold:**

- something_here.tar
    - I am sure its a great tarball

# Examples of code blocks comments

## Shell

```
run --name container_name image --arg1 127.0.0.1 --arg2 8001 arg3 test
```

## Another Shell

```
usage: build [-h | --help]

Build some docs

optional arguments:
  -h, --help          Show this help message and exit.
  -d, --docs          Build only the docs.
```

## Python

```python
from ipaddress import ip_address

import argparse
import datetime
import sys

class Tuxedo:
    """Class for doing stuff."""

    HATS = 28

    def __init__(self, args):
        """Initialize attributes."""
        self.var1 = 0
        self.var2 = 0
        self.count = 1
```

# Table Example

`wooden` table:

| Field Name | Type | Description |
| --- | --- | --- |
| wood type | VARCHAR(30) | Primary Key. What type of wood is it. |
| num_legs | DOUBLE | How many legs it has. |
| color | STRING | The color. |
| num_seats | DOUBLE | How many can sit at the table. |
